

RULE-BASED

Fixed policy via
conditional rules

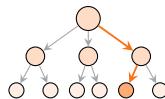

$\pi(a|s)$ as decision tree
e.g. *LightRush*

No adaptability

SEARCH-BASED

Forward simulation
& factorization

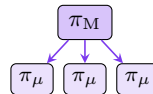

MCTS + CMAB
 $Q(s, a) \approx \sum_{i=1}^n Q_i(s, a_i)$

No multi-scale reasoning

HIERARCHICAL

Macro & micro decomposition

$\pi_{macro} + \pi_{micro}$
e.g. *PuppetSearch*

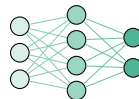

classical methods

Learning paradigm

Hand-designed decompositions

DRL

End-to-end learned policies

PPO + GridNet
Chapter 5
